

Abstract

The invention relates to a covering device (10) for vehicles, the device comprising a tarpaulin (12) which can be placed on or against the windows of a vehicle. At least one material section is provided for fixing the covering device (10) to the vehicle in a detachable manner. According to the invention, the material section can be fixed in a closable opening of a vehicle, especially in the opening region of a door and/or, the trunk and/or the engine compartment.
